

EL SCORE OS V1.0 — FINAL REQUIREMENTS DOCUMENT

1. PURPOSE

El Score OS is the internal operating system of El Score Academy.

It must coordinate the complete lifecycle of:

Lead → Sales → Demo → Admission → Academic → Classes → Progress → Renewal → Finance → Staff/Payroll

The system is intended to support **at least 2,000 active students and the necessary staff** without requiring duplicate data entry or unnecessary departmental complexity.

Core principle

Enter information once. Automatically update every place where that information is required, according to role permissions.

Every important record must maintain its complete history.

2. ORGANIZATION STRUCTURE

Departments

1. Administration
2. Marketing
3. Sales
4. Academics
5. Finance
6. HR

Roles

Administration

- CEO
- Operations Manager

Marketing

- Marketing Head
- Performance Marketer
- Designer

Sales

- Sales Head
- Sales Counsellor

Academics

- Academic Head
- Mentor
- Demo Coordinator
- Tutor

Finance

- Finance Head
- Accountant

HR

- HR Manager
- HR Executive
- HR Assistant

3. ROLE ACCESS PRINCIPLE

Access is based on **role**, not simply department.

Every role receives:

- Appropriate dashboard
- Appropriate records
- Appropriate actions
- Appropriate reports
- Appropriate filters

A user must not see information that is unnecessary for their work.

4. IDENTIFICATION SYSTEM

All important records receive automatic human-readable IDs.

Users never manually create IDs.

Required IDs

- Employee → EMP-0001
- Lead → LED-0001
- Student → STU-0001
- Tutor → TUT-0001

- Demo → DEM-0001
- Admission → ADM-0001
- Payment → PAY-0001
- Class → CLS-0001
- Renewal → REN-0001
- Meeting → MTG-0001

The database may use UUIDs internally.

Human-readable IDs are displayed throughout the system.

Whenever a record is created, its ID automatically appears wherever that record is referenced.

5. GLOBAL DATA RULE

Information must not be repeatedly entered.

For example:

Student STU-0142

is automatically connected to:

- Lead
- Parent
- Sales Counsellor
- Demo(s)
- Admission
- Mentor
- Tutor(s)
- Subjects
- Timetable
- Classes
- Hours
- Payments
- Renewals
- Academic progress
- History

Visibility depends on the user's role.

6. PARENT INFORMATION PRIVACY

Parent contact information is restricted.

Parent phone/contact information is visible to:

- Sales
- Demo Coordinator
- Mentor

Parent phone/contact information is not visible to:

- Tutor
- HR
- Marketing after Sales ownership
- Other employees unless specifically authorized

Tutors do not contact parents directly through the system.

7. LEAD MANAGEMENT

Marketing

A lead enters the system through Marketing.

Initially:

- Automatically from future marketing integrations, or
- Manually entered by Marketing

Marketing records/receives:

- Lead ID
- Basic lead information
- Source
- Campaign/source information where available
- Lead stage/status as updated by Sales

Marketing does not manage Sales activity.

Once the lead is handed to Sales:

Sales becomes the owner.

8. SALES SYSTEM

Sales Roles

Sales Head

Owns the entire Sales operation.

Can:

- View all Sales leads
- Assign leads
- Reassign leads
- Control Sales Counsellor assignment
- Control Round Robin
- Pause/activate Counsellors for Round Robin
- Add direct/referral leads
- Monitor pipeline
- Monitor Counsellor performance
- Manage Sales targets
- View reports
- Manage Sales operational actions

Sales Counsellor

Works only with assigned leads.

Can:

- Contact lead
- Call/WhatsApp
- Log communication
- Qualify lead
- Update lead
- Schedule follow-ups
- Follow up
- Book demo
- View demo updates
- Progress Sales pipeline
- Add notes
- Update relevant parent/student information

- Close sale
- Collect initial payment
- Initiate Academic handover

Cannot:

- Reassign leads
 - Manage Round Robin
 - Manage other Counsellors' leads
 - Manage departmental reports
 - Override terminal stages
-

9. SALES ROUND ROBIN

Marketing-originated leads are distributed through Round Robin.

Sales Head controls:

- Counsellor eligibility
- Active/inactive routing
- Order
- Pause/resume
- Manual assignment
- Reassignment
- Queue reset

Direct leads received by Sales Counsellors can be manually added by authorized Sales users and become owned by that Counsellor.

10. SALES DASHBOARD

Sales Head and Counsellors see appropriate versions of the Sales dashboard.

Sales Head

Shows:

- Total leads
- Leads by important pipeline stages
- Counsellor workload
- Today's new leads

- Today's follow-ups
- Overdue follow-ups
- Today's demos
- Demo completed
- Admissions
- Revenue collected
- Conversion rate
- Response latency
- Target
- Target achieved
- Amount remaining
- Priority leads
- Recent activity

Counsellor

Shows only their own:

- Lead count
- Important pipeline stages
- Today's new leads
- Today's follow-ups
- Overdue follow-ups
- Today's booked demos
- Demo results
- Admissions
- Revenue collected
- Conversion
- Target
- Amount achieved
- Amount remaining
- Priority leads

11. SALES TARGETS

Targets are configurable by authorized management.

Example:

- Monthly conversion target: 20%
- Monthly revenue target: ₹150,000 / AED 6,500

The system must support different targets according to company policy.

Revenue achieved is connected to Finance.

Revenue collection contributes to the monetary Sales target.

Referral admissions that are specifically marked as referral admissions do not count toward the Counsellor's normal Sales target where company policy defines them as excluded.

12. DEMO SYSTEM

Demo Coordinator belongs to **Academics**.

Multiple Demo Coordinators are supported.

Demo Coordinators use Round Robin assignment.

Demo creation

A demo can be created:

- From Sales
- For an existing student/parent
- Again for the same student when another demo is requested

Every demo receives an automatic:

DEM-0001

A student may therefore have multiple Demo IDs.

13. DEMO COORDINATOR

Demo Coordinator sees:

- Demo ID
- Student ID
- Relevant Sales information
- Parent information required for demo handling
- Student academic information supplied by Sales
- Requirements

- Concerns
- Preferred timing
- Relevant Sales notes

Demo Coordinator cannot modify Sales-owned information.

14. DEMO WORKFLOW

Sales books Demo

Demo Coordinator receives Demo

Demo Coordinator prepares/coordinates demo

Demo takes place

Demo Coordinator updates complete Demo Report

Sales automatically sees Demo Completed

Sales follows up

Sales closes or continues nurturing

15. DEMO REPORT

The Demo Coordinator updates the complete post-demo record.

Required information:

- Demo ID
- Student ID
- Demo Tutor
- Demo Coordinator
- Demo status
- Tutor feedback

- Demo Coordinator feedback
- Student strengths
- Student weaknesses
- Parent concerns
- Academic assessment
- Recommended roadmap
- Recommended number of classes
- Recommended class frequency
- Preferred class duration
- Preferred class timing
- Relevant remarks

The Demo Coordinator enters the tutor feedback based on the tutor's feedback.

There is **no separate complicated tutor demo-report workflow**.

16. SALES → ADMISSION

Sales closes the admission.

Initial package creation belongs to Sales.

Sales collects the initial payment.

Important business rule

Payment does not have to be completed before classes begin.

If the parent confirms that classes should start:

- Academic can receive the student
- Classes can begin
- Maximum **3 classes** may be conducted before the required initial payment is collected
- One class = one hour

The system must clearly show:

- Payment status
 - Classes permitted before payment
 - Classes conducted
 - Remaining permitted unpaid classes
-

17. SALES → ACADEMIC HANDOVER

When Sales closes the student and initiates Academic Handover:

Academic immediately receives the complete relevant student information.

Payment completion is **not required for the handover**.

The handover includes all relevant information already collected by:

- Marketing
- Sales
- Demo

including:

- Student information
- Parent information required by Academic
- Curriculum
- Grade
- Subjects
- Sales requirements
- Demo reports
- Tutor recommendation
- Student strengths/weaknesses
- Parent concerns
- Recommended roadmap
- Package information
- Initial payment status

No duplicate student creation is required.

18. ACADEMIC STRUCTURE

Academic Head

Owns the Academic Department.

Can:

- Manage Mentors
- Manage Tutors
- Manage Demo Coordinators

- Assign/reassign students
 - Manage Mentor Round Robin
 - Manage Tutor assignment
 - Manage Demo Coordinator Round Robin
 - Review academic information
 - Manage academic operations
 - Review student progress
 - Manage academic reports
 - Manage academic exceptions
 - Perform the required academic approvals
-

19. MENTOR

The Mentor is the primary academic coordinator for the student after handover.

Mentor receives all relevant Sales and Demo information.

Mentor manages:

- Student coordination
 - Mentor assignment
 - Timetable
 - Tutor assignment
 - Subject coordination
 - Class monitoring
 - Daily/required checklists
 - Academic remarks
 - Student progress
 - Parent-facing academic reporting information
 - Renewal request
 - Renewal collection/update
 - Student paid-hour monitoring
-

20. MENTOR ROUND ROBIN

Multiple Mentors are supported.

Academic Head controls:

- Mentor availability
- Round Robin
- Assignment order
- Pause/resume
- Manual assignment/reassignment

Mentor workload is visible.

Dashboard shows:

- Assigned students
 - Expected coordination hours
 - Hours handled
 - Current workload
-

21. TIMETABLE

Mentor creates the student's timetable.

Supports:

- Monthly timetable
- Weekly recurring classes where required
- Day
- Time
- Subject
- Tutor
- Duration

Default class duration:

60 minutes

The system should support:

30–120 minutes

22. TUTOR ASSIGNMENT

Tutor assignment is controlled by Academic.

The Mentor can assign:

- Existing tutor
- Newly available tutor

The tutor selected during the Demo can be assigned for that subject when appropriate.

Tutor assignment must consider the academic requirements and demo recommendation.

23. TUTOR STATUS

Tutor operational status is automatically determined.

Active

Tutor has an ongoing assigned student/class.

Inactive

Tutor has no ongoing assigned student.

This should update automatically.

HR employment status remains separate.

For example:

- Employment: Active
- Operational assignment: Inactive

means the tutor is employed but currently has no assigned students.

24. TUTOR SYSTEM

Tutor is an execution-only role.

Tutor sees:

- Their assigned students
- Today's classes
- Timetable
- Subject
- Student academic information required for teaching
- Required checklist
- Required academic instructions
- Relevant remarks

Tutor does not see:

- Parent phone number

- Finance information
 - Sales information not required for teaching
 - Other students
 - Other tutors
 - HR information
 - Department-wide data
-

25. CLASS WORKFLOW

Scheduled Class

Tutor conducts class

Tutor completes required checklist

Tutor submits post-class update

Mentor verifies/updates class

Student hours are deducted

Finance receives verified class information

Tutor salary is calculated from valid class record

If the Tutor does not submit the update within **12 hours**:

- Student hours can still be deducted if Mentor updates/verifies the class
 - Tutor receives **no salary for that hour**
-

26. CLASS CHECKLIST

Both Tutor and Mentor must complete the required checklist when updating/verifying the class.

The checklist can contain:

- Required class activity

- Class conducted
- Relevant academic completion information
- Required post-class information

Some checklist items can be:

- Per class
- Weekly
- Monthly

Only essential checklists should be used.

27. STUDENT HOURS

Student hours are connected to Finance.

The Mentor sees:

- Purchased hours
- Verified paid hours
- Used hours
- Remaining hours

Student hours are deducted based on completed/verified class records.

Finance verification is the financial source of truth for paid hours.

Academic should not modify the financial truth independently.

28. ACADEMIC PROGRESS SYSTEM

After every class, relevant academic data can be continuously updated.

The student academic record must support:

- Chapter covered
- Topic covered
- Strengths
- Weaknesses
- Difficult areas
- Homework/worksheet requirements
- Worksheet usage
- Games used where applicable

- Practice requirements
- Post-class activities
- Student response
- Improvement
- Areas requiring attention
- Remarks

The system must support:

- Chapter-wise tracking
- Model exams
- Exam performance
- Continuous progress updates

This information builds the student's long-term academic history.

29. PARENT PROGRESS INFORMATION

Academic records should allow Mentors to prepare clear progress information for parents.

The system should show improvement over time using the accumulated academic data.

Reports should be based on actual stored academic records rather than requiring the Mentor to recreate the history manually.

30. RENEWALS

Renewal is a transaction against the **same Student Profile**.

Do not create a new student.

When the current package is nearing completion:

Remaining hours ↓

Renewal required

Mentor requests renewal

Mentor manages renewal

Payment recorded

Finance updated

New hours added to same student

Sales owns the initial package creation/payment collection.

After handover, renewal belongs to Academic/Mentor.

31. FINANCE SYSTEM

Finance is the financial source of truth.

Finance manages:

- Tuition income
- Initial Sales collections
- Renewals
- Other income
- Expenses
- Salaries
- Tutor payroll
- Staff payroll
- Payment records
- Revenue reporting
- Financial verification
- Packages
- Outstanding amounts
- Financial reports

32. FINANCE DASHBOARD

Finance Head sees:

- New Sales revenue
- Renewal revenue
- Other income

- Expenses
 - Salary liabilities
 - Tutor hours
 - Tutor salary liability
 - Employee salary liability
 - Collections
 - Pending verification
 - Outstanding amounts
 - Monthly revenue
 - Monthly expenses
 - Net financial position
 - Relevant targets
-

33. PAYMENT FLOW

Initial Admission

Sales closes

↓

Sales collects initial payment

↓

Payment enters Finance

↓

Finance verifies payment

↓

Financial record becomes verified

Academic can begin classes before payment if the parent requests it, subject to the maximum 3-class rule.

Renewal

Mentor requests renewal

↓

Mentor collects/updates payment

↓

Finance records/verifies

New hours added

34. PACKAGE AND HOURLY RATES

The system must support:

- Package
- Subject
- Grade
- Curriculum
- Purchased hours
- Per-hour rate
- Student-specific offer/rate

Tutor salary rate can vary by:

- Grade
- Subject
- Tutor
- Student-specific arrangement

A student-specific rate must override the normal rate when applicable.

35. TUTOR SALARY

Tutor salary is connected to completed class records.

Tutor salary is calculated from:

Valid completed class × applicable tutor hourly rate

Tutor update must be submitted within 12 hours for tutor salary eligibility.

If Mentor updates/verifies the class but Tutor failed to submit within the required time:

- Student hours are deducted
- Tutor salary for that hour = 0

Both Tutor and Mentor must complete their required checklist when performing their respective update/verification.

36. OTHER STAFF SALARY

Finance manages salary calculations for:

- CEO/management where applicable
- Marketing
- Sales
- Academic
- HR
- Operations
- Finance
- Other employees

Salary structures support:

- Fixed salary
- Incentives
- Performance-based components
- Hour-based components where applicable

Example discussed:

- Demo Coordinator: ₹1,500 + ₹50 per successful admission
- Academic Head: fixed salary + ₹10 per completed class hour where applicable
- Sales: basic salary + incentive according to HR-defined policy

Salary rules must be configurable.

37. HR SYSTEM

HR Manager

Full HR access.

Responsible for:

- Employee records
- HR profiles
- Salary information
- HR remarks
- Employment status
- Staff records

- HR oversight
 - Tutor hiring oversight
 - HR-related approvals
-

38. HR EXECUTIVE

HR Executive is specifically responsible for **Tutor Hiring**.

Can:

- Create tutor recruitment/profile
 - Maintain recruitment stages
 - Record subjects
 - Record curriculum/syllabus
 - Record grades
 - Record hourly rates
 - Record salary rates
 - Maintain tutor profile
 - Create tutor account
 - Provide tutor login credentials
 - Maintain hiring data
-

39. HR ASSISTANT

HR Assistant works under HR Executive.

Can perform HR Executive-assigned work.

Access is limited according to tasks assigned by HR.

40. TUTOR PROFILE

Tutor profile contains:

- Tutor ID
- Employee information required by HR
- Subjects
- Grades
- Curriculum

- Syllabus
 - Applicable salary rates
 - Availability
 - Assigned students
 - Operational status
 - Relevant HR remarks
 - Academic remarks where authorized
 - Class history
 - Salary-related class records
-

41. EMPLOYEE WORKDAY & ACCOUNTABILITY SYSTEM

The system must provide a shared Employee Workday & Accountability system for all employees.

It must connect employee schedules, working days, working hours, leave, login/logout, work mode, daily responsibilities, assigned tasks and actual work completed.

The system should automatically use information already available in each department rather than requiring employees to manually recreate their daily work.

41.1 Employee Work Schedule

When an employee is created, HR defines their work schedule:

- Working days
- Weekly off days
- Start time
- End time
- Break duration
- Applicable work mode
- Leave policy/entitlement
- Role
- Department

Example:

Sales Counsellor
Monday–Saturday
10:00 AM–7:00 PM

1-hour break
Online / Offline

The system automatically knows whether the employee is scheduled to work on a particular day.

41.2 Start Work / Login

When an employee begins work, they select:

Start Work

If their role allows multiple work modes:

- Online
- Offline

If only one mode applies to that employee, the system should not ask unnecessarily.

The system automatically records:

- Employee
- Date
- Start time
- Scheduled start time
- Work mode
- Department
- Role

The employee should not manually enter the time.

41.3 Today's Work Dashboard

Immediately after starting work, the employee sees their work for that day.

The system should automatically generate the work checklist from existing departmental records wherever possible.

Examples:

Sales Counsellor

- New assigned leads
- Overdue follow-ups
- Today's follow-ups
- Today's demos
- Priority leads

- Assigned meetings
- Assigned tasks

Mentor

- Students requiring coordination
- Today's classes
- Pending class verification
- Academic updates
- Renewal actions
- Meetings
- Assigned tasks

HR Executive

- Tutor applications
- Pending recruitment actions
- Tutor profiles
- Account creation
- Assigned tasks
- Meetings

Designer

- Assigned designs
- Revisions
- Pending work
- Meetings
- Assigned tasks

The system must not require employees to manually create tasks that already exist elsewhere in El Score OS.

41.4 Two Sources of Daily Tasks

Daily work comes from two sources.

A. Automatic System Tasks

Generated automatically from departmental workflows.

Examples:

- Follow-up due
- Demo scheduled
- Class update required
- Class verification required
- Student requiring renewal
- Recruitment action pending
- Meeting scheduled
- Other system-generated responsibilities

Where the employee completes the actual activity inside the relevant module, the task should automatically update as completed where technically possible.

B. Assigned Tasks

Tasks manually assigned by an authorized manager, department head or Operations Manager.

Each task contains:

- Task
- Description
- Assigned by
- Responsible employee
- Date assigned
- Due date
- Priority
- Status
- Completion information
- Remarks where required

Task statuses:

- Not Started
- In Progress
- Completed
- Blocked

41.5 Workday Status

The system automatically maintains the employee's current work status.

Possible statuses:

- Scheduled
- Not Started
- Working
- On Break
- Completed
- Leave
- Absent

The system determines these from the employee's schedule, leave and workday actions.

41.6 Break

Employees can use:

Start Break

and:

End Break

The system records:

- Break start
- Break end
- Total break duration
- Break allowance where applicable
- Excess break where applicable

Break tracking should remain simple.

41.7 End Work / Logout

The employee selects:

End Work

Before ending the workday, the system displays a summary.

Today's Work Summary

- Scheduled working time
- Actual working time
- Break time

- Tasks completed
- Tasks pending
- Critical pending tasks
- Department-specific work completed
- Department-specific work still pending

Example:

Working time: 8h 05m

Break: 52m

Completed: 14/17

Pending: 3

Critical pending: 1

41.8 Pending Work at Logout

If mandatory work remains incomplete, the system displays the pending items.

The employee must indicate the reason where required:

- Continue tomorrow
- Waiting for another person
- Blocked
- Not required
- Other

The system records the explanation in the employee's work history.

Employees should not be forced to provide unnecessary explanations for every minor unfinished task.

41.9 Daily Work Completion

At the end of the workday, the employee confirms their workday.

The system records:

- Login time
- Logout time
- Break time
- Work mode
- Completed tasks
- Pending tasks

- Pending reasons
 - Department-specific work completed
 - Relevant activity history
-

41.10 Late Arrival and Early Departure

The system automatically compares actual work time with the employee's assigned schedule.

Example:

Scheduled: 10:00 AM

Started: 10:18 AM

Late: 18 minutes

Example:

Scheduled end: 7:00 PM

Ended: 5:42 PM

Early departure: 1h 18m

Where company policy requires an explanation, the system can request one.

41.11 HEAD / LEAD EMPLOYEE MONITORING

Department Heads and authorized team leads must be able to monitor their employees' workday.

They should see:

- Who is scheduled to work
- Who has started
- Who has not started
- Who is working
- Who is on break
- Who is on leave
- Who is absent
- Who came late
- Who left early
- Login time
- Logout time
- Work mode
- Scheduled working hours

- Actual working hours
- Tasks expected
- Tasks completed
- Tasks pending
- Critical pending tasks
- Reasons for pending tasks
- Department-specific work completed
- Department-specific work still pending

The Head/Lead should be able to open an employee and view their complete workday details.

41.12 HEAD / LEAD DASHBOARD

Each department Head should have a team accountability view.

Example:

Employee	Status	Mode	Start	End	Tasks	Pending
----------	--------	------	-------	-----	-------	---------

Counsellor A	Working	Online	10:02	—	12/14	2
--------------	---------	--------	-------	---	-------	---

Counsellor B	Working	Offline	09:58	—	9/11	2
--------------	---------	---------	-------	---	------	---

Counsellor C	Leave	—	—	—	—	—
--------------	-------	---	---	---	---	---

The Head should be able to filter by:

- Date
- Employee
- Role
- Status
- Work mode
- Department
- Completed/pending work

41.13 HEAD / LEAD LEAVE AUTHORITY

Authorized Heads/Leads should have the ability to provide/approve leave where applicable according to company policy.

The system must support:

- Leave request

- Leave approval
- Leave rejection
- Leave date
- Leave duration
- Leave type
- Approving authority
- Leave history

When leave is approved:

- Employee is automatically marked **Leave**
- Normal daily work expectations are suppressed for that day
- Employee should not appear as absent
- Relevant managers are notified

HR retains overall HR authority and leave records.

41.14 CEO ORGANIZATION-WIDE VISIBILITY

The CEO must be able to see the workday/accountability status of the entire organization.

CEO can view:

- Employees scheduled today
- Employees working
- Employees absent
- Employees on leave
- Online/offline status
- Login times
- Logout times
- Late arrivals
- Early departures
- Department-level task completion
- Pending work
- Critical pending work
- Employee-level workday history

CEO should be able to drill down:

Organization → Department → Employee → Date → Workday → Tasks → Activity

41.15 OPERATIONS MANAGER VISIBILITY

The Operations Manager has organization-wide operational monitoring authority.

Operations Manager can monitor:

- Employee attendance/workday status
- Pending work
- Critical unfinished tasks
- Department bottlenecks
- Overdue assigned tasks
- Meeting-related tasks
- Operational exceptions

Operations Manager can conduct/manage meetings and assign tasks arising from meetings or operational requirements.

41.16 ROLE-SPECIFIC WORK ACCOUNTABILITY

The system should measure work using the actual work records of each department.

It should not rely only on login duration.

Examples:

Sales Counsellor

- Leads handled
- Follow-ups completed
- Demos handled
- Admissions
- Revenue
- Tasks

Mentor

- Students coordinated
- Classes verified
- Academic updates
- Renewals

- Tasks

Tutor

- Classes conducted
- Post-class updates
- Required checklists
- Academic updates

Designer

- Designs assigned
- Designs completed
- Revisions

HR Executive

- Tutor applications
- Profiles completed
- Tutor accounts created
- Recruitment tasks

The employee's actual departmental work remains the primary source of productivity information.

41.17 WORKDAY HISTORY

Every workday must maintain history.

The system stores:

- Login
- Logout
- Breaks
- Work mode
- Scheduled hours
- Actual hours
- Late/early status
- Tasks
- Completed work
- Pending work
- Pending reasons

- Leave
- Relevant manager actions

Authorized managers can view historical workday records.

41.18 AUTOMATION PRINCIPLE

The Workday system should automatically pull information from existing modules.

For example:

Sales follow-up created

→ appears automatically in Sales Counsellor's daily work.

Demo booked

→ appears automatically in relevant Demo/Sales work.

Class scheduled

→ appears automatically in Tutor and Mentor work.

Class update required

→ appears automatically in the responsible user's work.

Meeting assigned

→ appears automatically in the employee's calendar and task list.

Task assigned by Head

→ appears automatically in employee's workday.

No duplicate manual checklist entry should be required.

41.19 WORKDAY + TASK + CALENDAR CONNECTION

The Workday system must connect with:

- My Tasks
- Calendar
- Meetings
- Sales
- Demo
- Academic
- HR
- Marketing

- Finance
- Operations

This means the employee has one daily work view rather than having to check every module separately.

41.20 EMPLOYEE WORKDAY PRINCIPLE

The system should provide **accountability without unnecessary complexity**.

The purpose is to answer four questions:

Was the employee supposed to work today?

When did they start and finish?

What were they supposed to accomplish?

What did they actually complete, and what remains pending?

The system should automatically answer these questions from the employee's schedule and actual departmental work wherever possible.

42. MARKETING SYSTEM

Marketing roles:

- Marketing Head
- Performance Marketer
- Designer

Marketing records lead generation information.

Performance Marketing handles marketing campaign/lead generation data.

Designer handles assigned design work.

Marketing employees can maintain their assigned work information where required.

Marketing should see the Sales stage of leads for relevant performance tracking but should not modify Sales-owned pipeline data.

43. OPERATIONS MANAGER

Operations Manager is responsible for operational coordination and exception management.

Operations Manager can conduct and manage meetings.

Operations responsibilities include monitoring situations such as:

- Unassigned leads

- Overdue follow-ups
- Demo actions requiring attention
- Paid students awaiting academic assignment
- Students without mentor
- Students without tutor
- Missing class updates
- Pending Mentor verification
- Pending Finance verification
- Renewal issues
- Other operational exceptions

Operations can coordinate the responsible department without taking ownership of that department's underlying data.

43. MEETING SYSTEM

Meetings are a shared system capability available across departments.

Operations Manager has authority to conduct/manage meetings.

Meetings receive automatic IDs:

MTG-0001

Meeting fields

- Meeting ID
- Title
- Meeting type
- Department
- Organizer
- Date
- Start time
- End time
- Location/link
- Participants
- Purpose
- Agenda

- Discussion
 - Decisions
 - Tasks assigned
 - Responsible person
 - Due date
 - Task status
 - Relevant attachments
 - Meeting history
-

44. MEETING TYPES

- Department Meeting
 - Team Meeting
 - One-to-One
 - Management Meeting
 - Review Meeting
 - Other
-

45. MEETING WORKFLOW

Meeting created

Participants selected

Invitation sent

Meeting conducted

Discussion recorded

Decisions recorded

Tasks assigned

Responsible employees receive tasks

Tasks tracked until completion

A meeting can create multiple tasks.

46. MEETING ACCESS

CEO

Organization-wide visibility according to permissions.

Department Heads

Can create/manage meetings for their department.

Operations Manager

Can conduct/manage operational and organizational meetings.

Employees

Can:

- See meetings they are invited to
- See meetings they organize where permitted
- See tasks assigned to them

47. MY TASKS

A shared task system.

Tasks may originate from:

- Meetings
- Department Head
- Operations
- HR
- Sales
- Academic
- Marketing
- Other authorized managers

Task fields:

- Task
- Source
- Assigned by
- Responsible person
- Due date
- Priority
- Description
- Status
- Completion information

Employees see their own tasks.

Managers see tasks according to their authority.

48. CALENDAR

A simple internal calendar.

It combines relevant:

- Meetings
- Follow-ups
- Demos
- Classes
- Tasks

My Calendar

Each employee sees only what is relevant to them.

Examples:

Sales:

- Follow-ups
- Demos
- Meetings
- Tasks

Mentor:

- Classes
- Coordination activities

- Meetings
- Tasks

Tutor:

- Classes
- Meetings/tasks where relevant

CEO:

- Management meetings
 - Relevant organizational events
-

49. REPORTING SYSTEM

Reports are required across all departments.

There should be **one Reports system**, not a separate complicated page for every report.

Reports must support relevant filters.

General filters where applicable

- Date
- Month
- Department
- Employee
- Role
- Status
- Student
- Tutor
- Mentor
- Sales Counsellor
- Subject
- Grade
- Curriculum
- Lead source
- Other relevant department-specific filters

Only relevant filters should appear for a particular report.

50. SALES REPORTS

Required reports include:

- Lead Activity
 - Follow-up
 - Demo
 - Lost Leads
 - Counsellor Performance
 - Pipeline Conversion
 - Revenue
 - Admission
 - Assignment
 - Conversion
 - Executive Revenue Summary
-

51. ACADEMIC REPORTS

Required reporting around:

- Student progress
 - Class completion
 - Tutor performance
 - Mentor workload
 - Student hours
 - Subject progress
 - Chapter progress
 - Model exams
 - Academic performance
 - Demo outcomes
 - Student retention/renewal
 - Tutor class activity
-

52. DEMO REPORTS

Reports around:

- Demo bookings
 - Demo completion
 - Demo status
 - Demo Coordinator performance
 - Tutor demo activity
 - Demo conversion
 - Demo feedback
 - Student assessment
 - Parent concerns
 - Recommended roadmap
 - Demo-to-admission performance
-

53. FINANCE REPORTS

Reports around:

- New Sales
 - Initial payments
 - Renewals
 - Tuition income
 - Other income
 - Expenses
 - Salaries
 - Tutor salary
 - Employee salary
 - Outstanding amounts
 - Payment verification
 - Revenue
 - Monthly financial performance
 - Relevant cash/collection data
-

54. HR REPORTS

Reports around:

- Employees
 - Tutor recruitment
 - Employment status
 - Tutor profiles
 - Salary structures
 - Staff records
 - Hiring stages
-

55. MARKETING REPORTS

Reports around:

- Leads generated
 - Lead sources
 - Campaigns
 - Marketing performance
 - Lead volume
 - Sales-stage outcomes relevant to Marketing
 - Performance Marketer activity
 - Assigned marketing work where applicable
-

56. OPERATIONS REPORTS

Reports around:

- Operational exceptions
 - Pending actions
 - Overdue tasks
 - Pending assignments
 - Workflow bottlenecks
 - Departmental operational status
-

57. HISTORY / AUDIT

Every important record maintains history.

History records important events such as:

- Creation
- Assignment
- Reassignment
- Status change
- Demo booking
- Demo completion
- Payment
- Admission
- Academic handover
- Mentor assignment
- Tutor assignment
- Class completion
- Verification
- Renewal
- Important profile changes
- Meeting decisions/tasks
- Other important actions

Records should not be unnecessarily deleted.

Inactive records remain available through history/archive.

58. GLOBAL SEARCH

A simple global search should allow authorized users to find records by:

- Student ID
- Tutor ID
- Lead ID
- Demo ID
- Admission ID
- Payment ID
- Employee ID
- Parent information where permitted

Example:

STU-0142

opens the relevant Student record.

59. NOTIFICATIONS

Notifications should be action-based.

Examples:

- Overdue Sales follow-up
- Demo requiring Sales follow-up
- Student awaiting Mentor assignment
- Student awaiting Tutor assignment
- Class update missing
- Mentor verification pending
- Finance verification pending
- Renewal approaching
- Meeting invitation
- Meeting task assigned
- Task overdue

Notifications should take the user directly to the relevant record/action.

60. PERMISSION PRINCIPLE

Each department owns its authoritative information.

Information	Primary Owner
Lead generation/source	Marketing/ Sales (direct or referral as applicable)
Sales relationship/pipeline	Sales
Demo	Demo Coordinator / Academics
Initial Sales payment collection	Sales
Financial verification	Finance
Academic coordination	Mentor / Academics
Tutor assignment	Academics

Information	Primary Owner
Teaching record	Tutor
Student academic record	Academics
Renewal after initial handover	Mentor / Academics
Employee record	HR
Tutor recruitment	HR Executive
Operational coordination	Operations
Meetings	Authorized organizers / Operations Manager
Financial truth	Finance

Other departments receive appropriate visibility without taking ownership of the authoritative data.

61. AUTOMATION REQUIREMENT

The system should automatically update wherever the information is already available.

Examples:

Sales → Demo

Demo booking automatically appears for the Demo Coordinator.

Demo → Sales

Demo completion and Demo Report automatically appear in Sales.

Sales → Academic

Academic Handover automatically creates the Academic workflow with existing student information.

Sales → Finance

Initial payment automatically enters Finance.

Academic → Finance

Verified class records automatically provide hours for financial tracking.

Academic → Tutor

Tutor automatically receives assigned student/class information.

Class → Student

Completed class automatically updates student class history and hours.

Class → Tutor Payroll

Eligible completed class automatically contributes to Tutor salary calculation.

Renewal → Finance

Mentor renewal/payment activity automatically appears in Finance.

Meeting → Tasks

Assigned meeting tasks automatically appear in the responsible employee's task list.

62. STUDENT LIFECYCLE

Marketing Lead

Sales Assignment

Sales Qualification

Demo Booking

Demo Coordination

Demo Completed

Sales Follow-up

Admission Closed

Initial Payment

Academic Handover

Mentor Assignment

Tutor Assignment

Timetable

Classes

Continuous Academic Progress

Hours Consumption

Renewal

Continued Classes

Important exception:

Classes may begin after admission confirmation and before initial payment, but no more than 3 classes may be conducted before the required initial payment is collected.

63. DESIGN AND USABILITY REQUIREMENT

The application must remain clean and simple.

The system should not create unnecessary workflows merely because technically they are possible.

Each role should see:

- Only relevant modules
- Only relevant data
- Only relevant actions
- Only relevant dashboards
- Only relevant reports

The objective is to reduce operational work, not create more administrative work.

64. SCALABILITY REQUIREMENT

V1 must be designed to support:

- At least 2,000 active students
- Multiple Mentors
- Multiple Tutors
- Multiple Demo Coordinators

- Multiple Sales Counsellors
- Multiple departments
- Large class histories
- Large payment histories
- Large academic histories
- Employee records
- Payroll records
- Meeting/task history

Historical records must remain accessible without requiring the system to recreate or duplicate data.

65. FINAL BUSINESS OWNERSHIP FLOW

MARKETING

LEAD

SALES

DEMO REQUEST

ACADEMICS — DEMO COORDINATOR

DEMO REPORT

SALES

SALE + INITIAL PAYMENT COLLECTION

ACADEMICS

MENTOR

TUTOR + TIMETABLE

CLASSES

ACADEMIC PROGRESS

FINANCE

HOURS / PAYMENT / SALARY

MENTOR

RENEWAL

FINANCE

This is the finalized V1 structure based on the requirements established in the project.
